

ONTARGET CONSULTING SERVICES · CAPABILITY BRIEF

Federal Critical Infrastructure Cyber Program Delivery

Program Governance and Delivery Support for Agencies, Prime Contractors, and Infrastructure Operators

James Truesdale, MS · PMP® · CSPO® · CSM® · ITIL® · Managing Partner
OnTarget Consulting Services, LLC · Peachtree City, Georgia

August 2026

The Firm

OnTarget Consulting Services, LLC is a technology program management firm established in 1999 in Peachtree City, Georgia, specializing in program stabilization and delivery for complex, multi-stakeholder initiatives. The firm's federal practice focuses on critical infrastructure cyber program delivery: helping agencies, prime contractors, and infrastructure operators move funded cybersecurity initiatives from intent to execution.

OnTarget does not compete with technology vendors or assessment firms. The firm operates as the connective tissue between strategy, governance, vendors, stakeholders, and measurable program outcomes — the specialized delivery capability inside programs that primes and operators already own.

Positioning

Critical infrastructure cyber initiatives rarely fail for lack of technology. They fail when governance, vendor coordination, and delivery discipline are weak across a program's many parties. OnTarget's role is that discipline: program governance and operating models, critical infrastructure cyber resilience planning, delivery and PMO support, modernization advisory, and executive decision support.

Service Line	Typical Deliverables
Cyber Program Strategy	Roadmaps, operating models, priorities, governance design
Critical Infrastructure Resilience	Resilience assessment coordination, sector plans, improvement portfolios
Program Delivery & PMO	Integrated plans, governance forums, risk tracking, vendor coordination
Modernization Advisory	Zero Trust, cloud, identity, and security transformation support
Executive Decision Support	Briefings, dashboards, strategic intelligence

Delivery Framework

Engagements apply the Critical Infrastructure Cyber Program Delivery Framework — a structured lifecycle for managing complex cyber initiatives across multiple vendors and infrastructure environments:

1. Infrastructure Discovery — establish the real asset, system, and stakeholder landscape.
2. Cyber Risk Assessment — coordinate assessment activity into a decision-ready picture.
3. Cyber Resilience Strategy — convert findings into a funded, sequenced improvement portfolio.

4. Program Governance Establishment — decision rights, forums, reporting, vendor accountability.
5. Implementation Management — multi-vendor execution with integrated planning and evidence.
6. Operational Transition — sustained operations with monitoring and ownership in place.

Sector Depth

The practice leads with energy and grid cybersecurity, grounded in the founder's three decades of enterprise IT delivery and nearly ten years inside utility and energy programs — enterprise system recovery, CIS modernization, and multi-vendor delivery in regulated environments. The firm brings operator-side fluency to federal programs: it has lived inside the environments these initiatives are designed to protect. Water systems, transportation networks, and other critical infrastructure sectors are in scope as programs demand.

Working With OnTarget

- For prime contractors: a specialized, fast-to-deploy subcontract partner for program governance and delivery gaps inside active engagements — easier to trust and quicker to field than scaling an internal bench, and structurally a partner rather than a competitor.
- For infrastructure operators: direct advisory support for meeting federal cyber requirements with program discipline — governance, coordination, and executive visibility.
- For agencies and program teams: delivery-side structure for funded initiatives — converting strategy and mandate into governed, evidenced execution.

Firm Facts

Item	Detail
Legal name	OnTarget Consulting Services, LLC
Established	1999
Location	Peachtree City, Georgia — serving clients nationally
